

Projects of 100 energy efficiency low carbon start-ups:

This project is an open plan, aiming to fill the huge blank market of carbon neutrality and provide business entrepreneurship opportunities, focusing on the way of private entrepreneurship or business transformation of small and micro enterprises.

It is planned to support 100 companies focusing on user-side energy efficiency services, and give comprehensive support to business models, product technologies, start-up funds and emancipation programs; Enable users, regions and cities to achieve the goals of improving energy efficiency, networking management, energy conservation and cost reduction, low-carbon and environmental protection;

At the same time, these entrepreneurial individuals and small and micro enterprises will be given opportunities to achieve their life and business goals and development; It is a plan that benefits

individuals,

enterprises,

society

and the future.
